

Solution Road Map

1

BRAINSTORMING

- A session began with inquiries, followed by a list of problems and study into other subjects. Finally, an application on cosmetics' environmental consequences was completed.

2

FAMILIARIZING WITH THE SOFTWARE

- Discussions and analysis was done to choose the software for our application. Android Studio was the IDE we chose for the project and as the SDK an open source software flutter was fixed. Further everyone contributed their time towards learning the dart language for flutter. Mastering to use git-hub was also done simultaneously.

3

RESEARCH AND ACTIVE WORKING

- Thorough research about the various products their constituents and the effect of each ingredient on our environment was done. Also for the section of alternatives in the application analysis on different brands that claim to be eco friendly was carried out and a curated list of the best was finalised.
- Concurrently team worked upon selecting templates for the app and working on flutter to develop an user friendly app. We overcame a lot of constraints together and gave our best towards the project

Solution Road Map

4

COMMENCEMENT OF HACKTHON

The much awaited hackathon started and the final touch ups for the project was completed. The preparation of abstract, making the video and deployment in the IBM cloud were done.

5

FUTURE SCOPE

A detailed planning and discussion was done on how to advance this project in the future so we can help people make greener decisons regarding their small decisions that can have larger impact on the environment in the long run.
